

## Reflection – Project 3

I learned quite a lot from this project. Firstly, I finally learned how to make a proper object model, which then helped me tremendously with the implementation.

There are two big lessons that I draw from the project: The first one was the main point of the project, how to work with and understand asynchronous JavaScript (AJAX). At the start of the project I struggled to make the simplest AJAX request but now I feel I understand it and feel confident in my ability write any AJAX request. The other big lesson I learned was how cookies really work and more importantly how to interact with them. I spent quite a bit of time figuring how to do read and write to cookies with RoR.

Knowing how to do AJAX scripting and reading/writing to cookies will enable me to write more complicated client-side applications in future projects.
